## Radiology Services at PIH – Pioneers in Radiology

The Radiology Services at Pacific International Hospital stands at the pinnacle in offering the full spectrum of diagnostic and therapeutic radiology services. Manned by certified and trained radiologist and subspecialist physicians, we are the first and only hospital to have the most cutting-edge diagnostic imaging facilities such as CT scan, MRI and Cardiac Cath Lab services in the country.

The Radiology Services are highly specialized striving to meet all patient and clinician needs in diagnostic imaging and image-guided therapies.

The beautifully designed patient care environments have been instrumental in enhancing the patient experiences with more comfort and ease. Some of the services offered are:

- Imaging Suite
- Philips 1.5Tesla Magnetic Resonance Imaging (MRI) Scanner
- Philips 64 Slice Computed Tomography (CT) Scanner
- Musculoskeletal Imaging (X-ray)
- Ultrasonography / Ultrasound
- Neuroradiology
- Colour Doppler
- Mammography
- Conventional Radiography
- 2 fulltime radiologists
- State-of-the-art diagnostic imaging and imaging-guided therapies
- Picture archiving and communication system (PACS) enabled radiology suites

### Why choose PIH?

#### Advance technology now in your own country

When it comes to imaging services, it is important for the procedure to be done right – the very first time. When you choose PIH, you are receiving images completed fast and most importantly accurately.

### Well Qualified Staff

Here at PIH, we offer our patients the latest and most advanced equipment, as well as the most highly trained radiologists and technologists. At PIH, you are receiving the best healthcare in the nation. Our remarkable medical staff, healthcare professionals set a standard of excellence.

PIH hopes to be the hospital of choice for everyone in need and is determined in delivering the best to all.

### Benefits of MRI and CT Scan

MRI Scan (Magnetic Resonance Imaging) and CT Scan (Computerised Tomography) both are two different types of imaging methods used by doctors to see inside your body.

Both the techniques create high quality images of the entire internal structure of the body that is seen on a computer screen, helping doctors to understand the condition of your organs.

#### CT Scan

A CT scanner uses X-ray beams for taking pictures. It can provide detailed information about the body, including the head (brain and its vessels, eyes, inner ear and sinuses), chest (heart and lungs), skeletal system (neck, shoulders and spine), pelvis and hips, reproductive systems, bladder and gastrointestinal tract.

#### Doctors will ask for a CT scan

- To diagnose a muscle or bone disorder or look for tumours,
- A fracture or a blood clot.
- Bleeding in the brain, especially from an injury, can be seen better on a CT scan than an MRI.
- If you are in an accident, organ tear and

injury, broken bones and spinal damage are seen more efficiently.

- Normally for any abdomen and pelvis scan, a CT is the benchmark over an MRI.

#### MRI Scan

MRI scans use powerful magnetic fields and radio frequency pulses to produce detailed pictures of organs, soft tissues, bone and other internal body structures.

Differences between normal and abnormal tissue is often clearer on an MRI image than on a CT. There is no radiation involved in an MRI scan, it can be a noisy exam and takes longer than a CT.

#### Doctors will ask for an MRI scan

- To see your tendons and ligaments'
- The spinal cord also can be seen better on an MRI image, since the density of these structures and tissues are more defined.

For women, inform your physician or the radiology technologist before any scans if there is any possibility you are pregnant. The question of whether a CT scan is re-

quired or an MRI is needed depends upon what part of the body needs to be examined and why the examination is being carried out.

#### Advantages for CT and MRI include

- Faster scanning
- Higher resolution images.

Decreased X-ray exposure. (The average CT scan today exposes patients to less radiation than what airline passengers receive on long flights.)

- Non-invasive techniques
- No hospitalisation
- Talking about their separate benefits

MRI is performed to evaluate:

- Organs of the chest and abdomen—including the heart, liver, biliary tract, kidneys, spleen, bowel, pancreas and adrenal glands.
- Pelvic organs including the bladder and the reproductive organs such as the uterus and ovaries in females and the prostate gland in males.
- Blood vessels (including MR angiography).
- Lymph nodes.
- Causes of pelvic pain in women (e.g. fibroids, endometriosis)
- Suspected uterine abnormalities in women undergoing evaluation for infertility.
- Tumours of the chest, abdomen or pelvis.
- Malformations of the blood vessels and inflammation of the vessels (vasculitis).

A CT exam may be done in order to assess particularly when other types of examination, such as X-Ray, USG or physical examination are not conclusive.

- Pinpoints the location of a tumour, infection or blood clot
- Guide procedures such as surgery, biopsy and radiation therapy
- Detect and monitor diseases and conditions such as cancer, heart disease, lung nodules and liver masses
- Monitor the effectiveness of certain treatments, such as cancer treatment
- Detect internal injuries and internal bleeding

If any question or doubt arises one should feel free to put it in front of the doctors. To set-up an appointment to meet our doctors at PIH call 79988000. We are currently offering 20% discount on MRI till 22<sup>nd</sup> November 2015. Call 70296170 for more details on the offer.

# Strengthening cooperation for sustainable management and development of tuna resources

By Veronica Hatutasi

A SUCCESSFUL conference on tuna was held in Nadi, Fiji from September 22-23 which saw about 400 participants from the Western and Central Pacific, Australia, New Zealand, Canada, members of the European Union (EU), Asia, and the Americas, congregate and discuss tuna-economics issues at the Sofitel Resort Hotel.

PNG with almost 200 delegates representing the national and provincial fisheries, the National Fisheries Authority (NFA), relevant government departments, businesses and industries into fisheries had the largest contingent at the 5th Pacific Tuna Forum.

The Pacific Tuna Forum is a bi-annual event initiated by PNG and held its 1st conference in Port Moresby, in 2007 with the main aim of getting together the Pacific Island countries who produce 50 percent of the world tuna catch, to work in cooperation to participate and benefit from the global tuna fishing industry, develop appropriate management, marketing and sustainability measures for the future, research and to establish viable fishing processing plants in the region.

This year's forum theme was: Achieving Optimal Economic Benefits Through Sustainable Tuna Management and Development.

The two forum days presented an excellent opportunity for all participants and among others, those interested in the largest tuna fisheries in the world to hear first hand from vessel operators, traders, processors and regulators about what is happening globally in the tuna world.

The main messages and concerns generally echoed throughout the forum for small Pacific Island nations were, "the need to work together and also with those that have investments in our region in sustainable management and development of tuna resources in their respective communities and countries, to strengthen the monitoring and surveillance programs in the region through broader cooperation with regional partners, and to establish processing plants for our fish to be processed in our countries and region."

In his opening address, Fisheries and Marine Resources Minister, Mao Zeming, emphasised the need for regional cooperation in sustainably managing our tuna resources and to also have our raw materials processed on shore.

"We need to work together to have better control in not only the sustainable management of our tuna resources, but also in formulating policies that would encourage the processing of these tuna resources within our region. We need to build our competitiveness around our tuna resources.

"We recognise the importance of working together and also, to work

**FORUM VIPS:** (L-R) Professor Glen Hurry, Partner at MRAG Asia Pacific, Australia was one of the 5th Pacific Tuna Forum Chairpersons, Dr Abdul Basir Kunhimohamed, Director-INFORFISH, Mao Zeming, Minister for Fisheries and Marine Resources, PNG, Osea Naiqamu, Fiji's Minister for Fisheries & Forests, Jacqueline Alder, Food & Agriculture Organisation, Rome-Italy and John Kasu, Managing Director, National Fisheries Authority, PNG.

**Photo: Veronica Hatutasi**

together with those that have investments in our region, our various government agencies, NGOs and our LLG's and communities to share ideas and address issues of concern to the sustainable management and development of the tuna resources.

"We need to work together so that we, as Pacific Island countries can increase the level of our participation in the various stages of the value chain in the tuna fishing and processing industries. By taking this approach, we can create employment opportunities for our people, be it on fishing vessels, processing plant or as marketing or business executives," Minister Zeming said.

He said that for far too long, the Western and Central Pacific region which is the home of half or 50 percent of the world tuna catch have

been mere spectators in the World Tuna forums, but with the

PNG initiated Pacific Tuna Forum since 2007, the importance of the Pacific Islands is beginning to be recognised.

Meanwhile, Fiji's Minister for Fisheries & Forests, Osea Naiqamu, echoed the same sentiments, stressing the importance of tuna not only as food security for the Pacific Islanders, but is also a part of the island communities cultural heritage and way of life, not forgetting the economic benefit it brings.

"Tuna is a very important resource in this region which provides a sustainable protein source for our people and an instructive value to our cultural heritage and way of life for our island communities," Mr Naiqamu said.

He said that according to a re-

cent World Bank study, the estimated catch value of tuna in our region stands at US\$2.4 billion.

"The questions that need to be asked are; what portion of this value is realised within our region? Are we only going to sell access rights and fishing days, or do we need to also support our people, our industries to also go into fishing? What about processing of these catches within our region? How can the Pacific Island countries, as custodians of the resources also participate in fishing, processing and trading of the tuna resource? Mr Naiqamu asked.

He said that with the current challenges faced by the global tuna fishing industry with low catch rates

with emphasis on the profitable & sustainable management of the industry, the value of fishery in the Pacific Island countries and how the island countries manage and sustain the fish stocks.

"We need to be very careful of the tuna stock by not taking too much, but at a manageable level.

"The message to the major players in the Western & Central Pacific regions, Fiji, PNG and Solomon Islands is for the respective governments to give the support needed and focus more on tuna as a tool for economic development, Professor Hurry said.

Day two saw presenters from Europe, the Americas, Asia and the Middle East emphasising on markets, labelling, brands, EU yellow card issuance, technology, monitoring and traceability in the West Pacific.

The chairpersons emphasised social responsibility and the need for more awareness on fisheries issues discussed at such forums.

The Yellow Card system which has seen being issued mostly to countries in the Pacific region by the European Union (EU) was seen as a warning to be taken heed of as in the long term, the stringent rules applied by the EU in terms of sanitation, sustainability & traceability & catch legality, greatly benefits the Pacific Island countries who are given first preference to market their tuna in the EU member countries markets.

Advances in technology is another new area which is now being applied for sustainability in fisheries, monitoring & surveillance in the Western Pacific, bringing in positive impacts on the industry, the summary stated.

Meanwhile, National Fisheries Authority (NFA) Managing Director, John Kasu in the forum's closing remarks stated that fisheries is a very important sector for the Pacific Island nations, and open and frank discussions regarding the industry's sustainability, management and development will greatly help the industry in the region to move forward.

For PNG alone, Tuna resources particularly is the main revenue earner for the fisheries sector in country and recently, NFA paid K25 million in dividends to the national government.

While acknowledging Fiji for hosting a very successful event as well as the input by the Forum Fisheries Secretariat, regional organisations and INFORFISH, Mr Kasu said the next forum will be hosted by PNG, and will be held in Port Moresby in 2017.

The PNG delegates were encouraged & challenged by Fiji's Deputy Secretary for Fisheries and Forests, Sanaita Naqali, on what they were taking back to PNG and also, their contribution to assist the region on the management and sustainability of the tuna industry.

being experienced, paying higher access fees and selling their catches at depressed world prices, a restructure of the whole industry is needed in terms of a reduction in the number of distant water fishing nations vessels that fish in our region as well as the overall number of fleets.

He stated that with these concerns, the recent Pacific Islands Forum Leaders Summit held in Port Moresby last month adopted a roadmap for sustainable fisheries.

At the conclusion of the two days Nadi forum, conference chairpersons, Phil Roberts and Professor Glen Hurry, gave a brief summary with the following highlights:

The forum was a success, with very open and frank discussions on the industry which saw the first day giving a chance to the majority of presenters from the Pacific region

# Sustainable Tuna Management and Development in PNG – 2015 Update

By John Kasu, Managing Director, National Fisheries Authority, September 22, 2015, Sofitel Hotel, Nadi, Fiji.

**Briefs:**

1-CURRENT STATUS AND CHALLENGES FACING SUSTAINABLE TUNA MANAGEMENT AND DEVELOPMENT IN PNG:

PNG FISHERIES WATERS: Command 17% of the world tuna catch, 33% of WCPO tuna catch, 52% of PNA tuna catch.

**Current Status:**

PNG is not only home to major fishing ground, but ALSO becoming a major tuna processor and a fishing state.

CURRENT OUTLOOK does not seem all that rosy

- 1- Total tuna catch estimate for 2014 fell by 42% to 297,178.82mt;
- 2- El Nino phenomenon, expecting further fall in tuna catches in 2015;
- 3- A total of 203 vessels were active in 2014; 23 were long-line and 193 purse seine vessels with 13 of the purse seine vessels flying PNG flag;
- 4- Purse seine vessels fished a total of 16,383 days in PNG under the vessel day scheme; 13 PNG flagged vessels used 2,944 days; PNG chartered vessels with 4,532 days and foreign access topping with 8,907 days fishing and searching in PNG waters;
- 5- 2015 has seen Archipelagic Waters (AW) days reduced to 5,500 from previous 8-10,000;
- 6- 5 tuna processing plants are in operation, all operating well below their full processing capacities and with around 15,000 employees,
- 7- 1 new tuna processing plant to be opened at the last quarter of 2015;
- 8- EU issued yellow card to PNG;
- 9- PNG remains committed to building a sustainable tuna industry – progressively requiring and fishing licences to be linked to processing capacities

**STILL MANY CHALLENGES**

- 1- High costs of production in comparison to competitors in the Philippines and Thailand;
- 2- Duty free status of exports to EU, no longer exclusive, also available to competitors;
- 3- Road to building a sustainable and competitive tuna processing industry in PNG and for that matter in our region is never easy;
- 4- Competitors lower costs of production, closer proximity to the EU and thereby lower freight costs enables them to be in a much stronger position and
- 5- Only one real advantage - tuna resource.

- PNG Catch = 580.000 M/T
- Currently 37.000 M/T whole tuna is cleaned & canned for export (6%)

**European Union Market**

- Almost 70 percent of PNG's canned tuna goes to Germany, UK- 16 percent, Netherlands- 12 percent, Belgium- 5percent, France-5 percent and others- 5 percent.

Total 19,535 M/T in 2012

**Benefits**

- 1- Foreign exchange earnings;
- 2- Larger user of utilities making it attractive

**FORUM HEAVIES:** Part of the main players of the 5th Pacific Tuna Forum including Fiji's Deputy Secretary for Fisheries and Forests, Sanaïta Naqali, NFA MD, John Kasu, INFORFISH Director, Dr Abdul Basir Kunhimohamed and SPC's Principal scientist, Shelton Harley.

**REGISTRATION TIME:** Kule'en Hamou from the Manus Provincial Government was among the PNG delegates during registration.

**PARTICIPANTS:** Some of the participants during the session.

- for suppliers to make it attractive for suppliers to improve services;
- 3- Establishment or strengthening of support services;
- 4- More shipping lines and favourable freight rates and
- 5- Creation of employment and spinoff opportunities.

**2. POLICY CHANGES THAT THE GoPNG HAS TAKEN TO ADDRESS FISHERIES**

**MANAGEMENT, IUU ISSUES ANDEU ISSUANCE OF YELLOW CARD TO PNG:**

- 1- All catches within Archipelagic Waters to be processed in PNG;
- 2- VDS allocations for Archipelagic Waters issued to tuna processors who will then allocate to their fishing vessels or associated fishing vessels;
- 3- By end 2016, there will no longer be locally based foreign flagged vessels. All

vessels to be either PNG flagged or Foreign Flagged and

- 4- Tuna processing plants are encouraged to increase their levels of processing capacities with fishing licences to be reviewed to reflect processing capacities.

**EU issuance of yellow flag**

In June 2014, the European Union issued yellow flag to PNG for following reasons:

- 1- Conservation and Management Measures;
- 2- Legal and Administrative Framework;
- 3- Compliance Scheme: MCS Measures and Traceability;
- 4- Improvement in the implementation of the Catch Certification Scheme.

PNG has committed vast amounts of resources to addressing these issues and has undertaken following reforms:

- 1- Review of National Fisheries Management Act;
- 2- Review of National Tuna Management Plan;
- 3- Development of National Plan of Action for Illegal, Unreported and Unregulated Fishing,
- 4- Enhanced port monitoring, CDS and eCDs and
- 5- Flag CDS to facilitate flag state compliance of PNG development partners.

**Integrated Fisheries Information & Management System (IFIMS**

- NFA have made large investments in technology;
- Promotes Real Time Electronic Reporting

**3. CONCLUSION &WAY FORWARD FOR SUSTAINABLE DEVELOPMENT OF TUNA FISHERIES IN PNG**

Way forward for PNG and the region

- 1- Continuing investments in fisheries management tools and systems and in our people to be able to better manage our fisheries resources for the optimum benefits of both the present and future generations;
- 2- Work with our respective tuna processing industries and all stakeholders to strategically invest in areas that can improve our supply chains and our competitiveness and
- 3- Explore options under such arrangements such as the PNA VDS to ensure that tuna that is caught within the waters of our region, landed and processed in our region will cost less to regionally based processors and that any tuna that is taken whole from our region to processors outside of our region will be far more costly.

## Seim seks na pamuk i no stret

I gat tok win i stap olsem, long dispela wik Novemba las sisen bilong Palamen gavman bai kamapim wanpela lo long tok orait long pasin pamuk na seim seks marit olsem man –man na meri-meri.

Em i olsem wanem? Dispela lo i stap long Buk Tambu bilong God o gavman bilong yumi i laik kopim lo bilong ol narapela Kantri? Tru pasin pamuk em i stap long Baibel na dispela em i sin. Long olpela mama lo bilong sios, Moses i kisim long han bilong God long Mt Sainai, namba 7 lo i tok, yu no ken mekim pasin pamuk. Em i no tok yu ken pamuk, nogat! Em i tambuim yumi long Adaltri. Em i soim yumi klia olsem, em i sin na yumi bagarapim haus holi bilong God.

Long Santu Mak 10:19 Jisas i stori wantaim wanpela man i gat planti samting na

em i tokim em long i no ken brukim marit na mekim pasin pamuk. Tru pasin pamuk i tok klia olsem, pamuk em sin tasol, maritim man-man na meri-meri em i no stap long Buk tambu na em rong olgeta. Em ol lida bilong yumi i laik go egensim oda bilong Kriesin o God.

Long Genesis 2: 7-24 em stori bilong Adam na Eve o man na meri, i no Adam-Adam o Eve-Eve God i kamapim man na meri i gat as tingting. Em bilong kamapim pikinini long inapim plen bilong God.

Taim God i kamapim man pinis na bihain em i kamapim meri na em i salim i kam long poroman wantaim Adam na Adam i tok, em i poroman tru bilong mi bun bilong em i kamap long bun bilong mi na mit bilong em i kamap long mit bilong mi. God i wokim em

long bun na mi bilong mi olsem na bai mi kolim em meri na tupela wanpela bodi tasol. Eve i kamap meri bilong Adam na kamapim famili. Nau olsem wanem, sapos man i marit long man na bai tupela i ken kamapim pikinini o nogat?

Lukim ol palamenterien i laik mekim bikipela asua na dispela asua i laik winim stret God.

I gutpela sapos ol i ken i go antap long mun na mekim dispela sinful laip. Yumi i no laik lukim dispela kain enimal long Papua Niugini. Yumi les long lukim dispela kain sik sosaiti insait long kalsa na gutpela Kristen pasin na sindaun bilong yumi.

I gutpela ol memba i mas i kam na kisim tingting long ol lida man bilong yumi sios pastaim na tu, sios yumi i no ken moa pasim maus long dispela kain bikhet bilong ol memba

husat i laik kamapim lo long palamen. Wanem as tingting tru ol BOC na Spika long rausim totem pos na putim KJV Baibel long haus palamen? Ansa bilong dispela i olsem, bilong kamapim lo long pasin pamuk na mekim man i ken marit long man na meri i ken marit long meri. Dispela em pasin bilong Satan stret na satan nau i kontrolim ol lain husat i go pas long dispela pasin doti na hambak.

Lukim taim Adam na Eve i sakim tok na kaikai prut bilong diwai i gat laip, tupela i sem pipia stret long ai bilong God. Olsem na sapos ol memba i kamapim dispela lo bai kamapim bikipela sem long sios i sanap bung na pait long ol pasin nogut na lo nogut i laik kamap long Kantri bilong yumi PNG.

# Excerpts from a paper presented at the 5th Pacific Tuna Forum in Nadi, Fiji by Augusto C Natividad, Frabelle (PNG) Ltd.

## Opportunities and Challenges of Investing in The Pacific

Tuna Industry (our PNG Experience)

### Opportunities:

- Philippines and Thailand have each only very small market share of EU market. Despite its GSP+ they would have limited qualifying fish supply to the EU markets. Ecuador has the most share (has own fish stocks too).
- A bigger portion of the processed tuna is still done within the EU.
- WCPO through PNG has a very small share (whole of PNA must help nurture PNG, being the only country with global sourcing benefit, to increase their share.) Unfortunately, current processed tuna production within WCPO is just within 5 % level of fish production. (This is a big opportunity, but also a big challenge.)
- WCPO is the source of almost 50 % of the world tuna supply, of which PNG is more than 10 % & has all the resources to be able to process tuna at the most competitive cost.
- It has hydro source of power, abundant fresh water, manpower, land and other inputs,
- Tax scheme that allows duty free for almost anything not processed in PNG, Zero rated VAT for export, growing consumer base, globally sourced tuna, duty free to EU, including catch from other Pacific Islands, tuna resource of its own, on a limited scale, has natural waste to produce power and steam and solar as potential, abundant fresh water (but is also a challenge), a young work force & government willingness to provide incentives.

### FOR PNG:

- After Frabelle invested in PNG, we have seen the convergence of some of the major tuna players in the industry in PNG: (this is an opportunity for the support industries)
- - Thai Union of Thailand; Century Pacific of the Philippines; Century Containers of the Philippines; FCF of Taiwan reinvested. Proposal from Dong Won; at one time expression of interest by Tri Marine; expression of interest by the Calvo group.
- Through Majestic Seafood, some investors were ready to set up PNG companies to work with a shore based company and all the boats they introduce are PNG flag.
- With the globally sourced tuna being duty free, PNG USD revenue can be significantly increased if they encourage PNG fish to be exported and non PNG globally sourced tuna to be processed on shore and exported as PNG product.

### CHALLENGES:

#### Infrastructure

- Build your own, again treat this as a separate business unit having its own viable returns, related industries-need to attract other players and cooperative approach among competitors to reach economies of scale.

### How to convince government leaders:

- To recognize the significant positive impact of the tuna industry development to its economy and; to help to improve (rather than restrict) atmosphere to bring in more players, that tuna is a renewable resource and provides employment opportunity for

the whole range of the working age population.

- In PNG currently Government is not allowing the opening of a foreign fund account even in a PNG bank.
- To be able to develop and innovate as our competitors from other countries are doing, especially those which are also duty free to EU, and about to be (China, Vietnam, Indonesia)

### REVENUE FROM TUNA RESOURCES (from perspective of country's economy)

Assumption: Per vessel Annual need for VDS = 220 days  
 Approximate Annual Catch = 8,000 MT  
 Revenue from VDS through bidding:  
 220 days x USD 12,500.00 per VDS = USD 2,750,000.00  
 Revenue from fish if exported by a PNG Domestic vessel:  
 8,000 MT x USD 1,500.00 per MT = USD 12,000,000.00

### Challenge to the host country:

Work with countries that share your fish stocks, help countries that are unable to support a competitive tuna industry so you can benefit from their resources.

Desist from imposing self-induced obstacles that obstruct the ability of your tuna industry to cope with the world markets, recognize the state of the world tuna industry, allow market forces to take place, do not attempt to legislate growth, unless you as a country can guarantee to buy at world market price all the products that your industry can process.

### Challenge to every PNA country

If you are ready to accept our challenge kindly allow us to come and negotiate with you.

# MAXIMISING ECONOMIC GAINS THROUGH BETTER MANAGEMENT OF TUNA RESOURCES IN THE PACIFIC by Transform Aqorau, Chief Executive Office, PNA Office

Paper prepared for the 5th Pacific Tuna Forum, Nadi, Fiji- 22-23 September 2015.

Maximising economic benefits from the tuna fisheries has been at the heart of the endeavours of the Pacific Island countries ever since the negotiations of the 1982 Law of the Sea Convention which gave rise to the extended maritime jurisdictions now commonly known as the exclusive economic zones (EEZs).

You may argue that this principle is inherent in the calls made by the late ambassador Pardo of Malta when he called for the high seas areas beyond national jurisdiction to be preserved as the "Common Heritage of Mankind". It was a period of agitation to restructure the international economic order of the oceans so that the wealth of the oceans could be shared with newly emerging States. At the time the idea of the extended maritime zones was gaining international acceptance at the 3rd UN Conference on the Law of the Sea, Pacific Island countries were also emerging as independent States. The Prime Minister of Fiji, Ratu Sir Kamisese Mara supported by Fiji's Secretary for Foreign affairs and key negotiator at the Law of the Sea Conference, Ambassador Satya Nandan had the foresight to ensure that these newly emerging independent States should also benefit from the expanded maritime jurisdiction to develop the natural resources in these maritime areas. Thus, the 1976 Forum Leaders declaration on the law of the sea called on Pacific Island countries to claim 200 mile Fisheries or exclusive economic zones. Hence, the idea of extended maritime jurisdictions, fishing rights, maximisation of economic benefits and self-determination have been intertwined right from the onset of nationhood. The confluence of independence, self-determination, extended maritime jurisdiction, sovereign rights and maximisation of economic benefits from the oceans is important in understanding the management framework that informs this discussion, especially in appreciating the evolution of management frameworks that have been aimed not only at sustaining tuna stocks but also in ensuring that Pacific Islanders are not just bystanders.

The idea of maximising economic gains from the tuna resources has its origins in nation building; in providing a base for economic development; and in providing a means to improve the social and economic well-being of Pacific Islanders

The attempts to establish the management framework through which the Pacific Island countries could work on the economic gains from their tuna fisheries have been centred around 5 institutions, which have varying degrees and shades of responsibilities. These are the Pacific Island countries themselves through their Fisheries Depart-

(L-R: ) Hugh Walton, Forum Fisheries Agency (FFA) Advisor, Shelton Harley, Principal Fisheries Scientist – Secretariat of the Pacific Community (SPC) & Dr Transform Aqorau, CEO Parites to the Nauru Agreement (PNA) Office, at the Sofitel Hotel conference during a break. Photo: Veronica Hatutasi

ments who are the primary custodians of the tuna resources and who exercise on behalf of their citizens together with other State agencies sovereign rights to exploit, explore, develop and manage the fisheries; the Secretariat of the Pacific Community whose scientific support in stock assessment and understanding biology of the tuna is necessary in ensuring that fisheries managers are served by having the right information before them; the Forum Fisheries Agency whose technical and policy support in the drafting of fisheries management laws and regulations, development of fisheries management plans, and monitoring, control and surveillance (MCS) platforms.

There are two institutions whose roles and decisions on the Pacific Island countries have far greater impact on economic incomes and gains because of the way they are constructed. These are the Nauru Agreement Parties or the PNA in whose waters almost 70-80% of the tuna in the Western and Central Pacific and who supply about 40% of the global skipjack catch that goes to canning, and who have legally binding decision making mechanisms through what are known as the PNA Implementing Arrangements and the Palau Arrangement under which vessel limits were placed and which are now replaced by effort controls known as the Vessel Day Scheme (VDS).

The PNA is a management and regulatory authority in which the Parties collectively exercise legally binding decision making functions in so far as the limits on fishing effort are concerned. Examples of conservation and management measures that the PNA have instituted include the 3 Months FAD closure, 100% Observer coverage on all purse seine fishing vessels, 100 % tuna catch retention, in port transshipping and the prohibition on fishing in the high seas pockets. The Western and Central Pacific Fisheries Commission (WCPFC) is

the overarching organisation which provides the conduit through which members of the WCPFC ensure that conservation and management measures for tuna stocks adopted for the high seas are compatible with in-zone measures.

In the past 5 years, revenues to the PNA Members have increased from around \$60 million in 2010 to an estimated \$350 million this year. This is the largest tradable natural asset in the region. There is no doubt that the VDS has been effective in increasing revenue to the PNA members, and will continue to be a valuable instrument to PNA members.

There has to be better controls overall including in Indonesia and the Philippines, and the high seas, particularly the Eastern High Seas areas which are open. We have initiated measures through the WCPFC to ensure that the stocks remain robust and sustainable, including the adoption of Limited Reference Points (LRP) and have supported the implementation of harvest strategies, involving adoption of reference points (RPs) and Harvest Control Rules (HCRs) as a basis for maintaining healthy WCPFC tuna stocks that could benefit PNA, in particular because of their dependence on these stocks.

The PNA tuna fishery is very complicated. It is a multispecies, multi-fleet and multi-national fishery. It comprises four tuna species in addition to several species of billfish and tuna-like species being fished by a large number of fishing nations, at least 12 nations, employing several different types of fishing gear the most important of which are purse seine, long line, pole and line complemented by various types of fish aggregating devices (FADs). The fishery is prosecuted over a very large area containing many national EEZs as well as high seas areas and the tuna harvested enters several processing and marketing lines in different countries.

Skipjack tuna remains in a very

healthy state and the challenge is to expand the opportunities in which the economic gains from the harvesting of these resources may be maximized.

In 2014 the PNA conducted an independent review of the Purse Seine VDS. Part of the review process investigated the bio-economics of the purse seine VDS and found that overall given recent operating conditions (input and output prices) there is a high probability that fishing fees can be substantially increased in the fishery to a likely range for a maximum daily fishing fee around \$12-17,000 with a likely range for the maximum annual fees to be between \$370 million and \$1150 million.

The authors of the VDS Review were quite confident in their bio-economic investigations which indicate that actual fishing fees collected have been significantly below what has been attainable. This is borne out by the fact that benchmark VDS fees have increased drastically over the past few years while the operating conditions in the fishery have remained comparatively stable.

The question was asked as why fishing fees have not been maximized, and among others, the main explanation is that the fee pricing policy has simply not been aggressive enough.

Effort vs. harvest-based systems  
The current debate on the fisheries management framework is whether we should move from the current VDS effort system to catch limits or harvest based systems. Indeed, this was an issue that was considered by the Authors of the VDS Review in which they argued that limited effort systems, such as the VDS, suffer from a fundamental weakness that prevents them from generating economic benefits to the participants in the long-term. This fundamental weakness stems from the fact that fishing effort is a multidimensional phenomenon and fishers constrained by effort limitation will have a strong incentive to

expand those dimensions of fishing effort that are not limited.

Harvest-based systems, where the volume of harvest by individual fishers is constrained, do not suffer from this weakness. It is well established both theoretically and empirically that such systems are capable of generating the highest possible flow of economic benefits from fisheries on a sustainable basis. As a tool to maximize the flow of economic benefits from the PNA tuna fisheries, harvest-based systems, therefore, should in principle be superior to the current effort-based system.

### Conclusion

It is clear that economic outcomes and gains depend fundamentally on the structure of the fisheries and the day to day controls that Pacific Island countries have over the fishery. The PNA Members have shown this to be the case with the reform of the purse seine fishery by the application of hard limits through the Vessel Day Scheme. There are hard limits for skipjack to which PNA Members are held accountable for to the WCPFC through the Total allowable Effort (TAE) under the VDS, and hard skipjack limits that other coastal States are accountable for. Tightened limits on the high seas with no SIDS exemptions would provide further controls, enhance the scheme and effectively control oversupply.

This management framework will include managing capacity by applying the WCPFC definition of capacity as follows:

"The amount of fish or fishing effort that can be produced by a vessel or a fleet if fully utilised and for a given resource condition."

To estimate the levels of effort in the tropical tuna fisheries and the tropical purse seine and long-line fleet sizes consistent with the amount of fishing opportunities available from the sustainable yields of the Tropical Tuna species, and allowable effort and catch under the WCPFC measures for tropical tuna.

PNA Members will manage purse seine capacity in their waters by effort limits under the VDS and the price of days. These approaches are designed to maintain the right size of fleets, while providing opportunities for new vessels that provide more benefits to PNA Members and removing vessels that are uneconomic or uncooperative in terms of failing to support domestic development.

As I said, these reforms and building new structures are an evolutionary process and take time to construct, patience to build, and must ensure that the custodians of this resource are not bystanders but participants in the fishery.

My message to the Forum is please work with us, and support the systems that we have developed; don't try and undermine the fisheries management framework that we have developed, because we will ultimately win; we are here to stay.
